

Self Study for Computer Science and Engineering

Self Study Plan

This document organizes resources for self-learning computer science, engineering, electronics, and mathematics, including free and paid platforms.

1. Math (Foundation for Engineering & CS)

- [OneMathematicalCat.org](https://www.onemathematicalcatalog.org/) - Algebra, Precalc, Calculus
 - [Greenemath.com](https://www.greenemath.com/) - Algebra & Precalc practice
 - [CalcWorkshop.com](https://www.calcworkshop.com/) - Calculus
 - [Geometry](https://www.geometry.com/)
 - <https://www.allmath.com/>
 - [desmos.com](https://www.desmos.com/)
 - [AllTheMath.org](https://www.allthemath.org/) / [Discrete Math](https://www.discretemath.org/) - Logic, sets, graphs, combinatorics
 - [MathsPower4U.com](https://www.mathspower4u.com/) - Videos for all math topics
 - [Runestone Academy](https://www.runestoneacademy.com/) - CS-focused math exercises
 - [ProPrep.com](https://www.proprep.com/) - Optional paid practice
 - [Engineer4Free.com](https://www.engineer4free.com/) - Free math & basic engineering resources
-

2. Programming & Computer Science Fundamentals

- **[OSS](https://www.ossu.edu/) University Path to a free self-taught education in Computer Science!**
 - [NeetCode.io](https://www.neetcode.io/) - Algorithms, DSA practice (lifetime membership)
 - [Introduction to parallel programming](https://www.parallelprogramming.com/) (in c++)
 - [Software construction elements](https://www.softwareconstruction.com/)
 - [software construction abstraction](https://www.softwareconstruction.com/abstraction)

 - [Java Programming](https://www.java.com/)
 - [CS61A](https://www.cs61a.org/) - Intro to CS, Python, Data Structures
 - [TeachYourselfCS.com](https://www.teachyourselfcs.com/) - Core CS concepts
 - [LearnCPP.com](https://www.learn-cpp.com/) - C++ basics & intermediate
 - [Technology Library](https://www.technologylibrary.com/)
 - [HackingCPP.com](https://www.hackingcpp.com/) - C++ exercises
 - [StudyPlan.dev](https://www.studyplan.dev/) - Structured C++ curriculum
 - [BigMachine.io](https://www.bigmachine.io/) - Self-taught programming exercises
 - [Sp21.datastructur.es](https://www.sp21.datastructure.es/) - Data structures & algorithms course
 - [C++ multithreading](https://www.cplusplus.com/multithreading) Modern C++ Features & Concurrency
-

3. Systems & Low-Level Programming & introduction to Engineering

toptechboy.com

- Nand2Tetris.org - Computer architecture & logic design
 - [turning complete game](#)
 - NandGame.com - Hands-on digital logic
 - [Advance C++ course](#)
 - [Introduction to Electricity and Magnetism Specialization](#)
 - [wokwi.com](#)
 - [Linear Circuits 1: DC Analysis](#)
 - [Linear Circuits 2: AC Analysis](#)
 -
 -
 - [Electric Power Systems](#)
-
- [Digital Signal Processing Specialization](#)
- - [Computer Architecture](#)
 - [Electrical engineering 101](#)
 - [Teach yourself Electricity and electronics](#)
 - Assembly Language PDFs:
 - [Learning the art of electronics](#)
 - Introduction to 64-bit Intel Assembly Language Programming for Linux
 - Assembly Language Step-by-Step Programming with Linux 3rd Edition
 - [Introduction Operating system](#)
 - [CS423 Operating System Design](#) - OS concepts
 - [LabEx.io](#) - Linux virtual lab environment
 - [FastbitLab.com](#) - Embedded programming
 - QT course udemy for c++ beginner course [link](#)
- [Introduction to Engineering](#) Book
- [Design of Digital Circuits with VHDL Programming](#)
- [Crash Course Electronics and PCB Design](#)**
- [Mastering Microcontroller: STM32-LTDC, LCD-TFT, LVGL \(MCU3\)](#)**
- [Mastering Microcontroller and Embedded Driver Development](#)**

4. Networking & Telecommunications

- [Teracom Training](#) - Online telecom courses
 - [TCP/IP Guide](#) - Networking theory
 - Computer Networking: A Top-Down Approach PDF
 - [Su25 CS168.io](#) - Networking exercises
-

5. Electronics & AI & Robotics

- [DCACLab.com](#) - Online circuits
 - [Power systems](#)
 - [CircuitLab.com](#) - Circuit design
 - [AllAboutCircuits.com](#) - Electronics tutorials
 - [Ohmify.com](#) - Electronics fundamentals
 - [Kevin Wood Robotics](#) - Robotics projects
 - [Udacity Robotics Software Engineer](#) - Robotics programming
 - [Data camp](#)
 - [Quirk: Quantum Circuit Simulator](#)
-

6. Physics

- [FlippingPhysics YouTube](#) - Physics tutorials
 - [PhysicsLab.app](#) - Interactive simulations
 - [Quntum Computing](#)
 - [MyPhysicsLab.com](#) - Physics simulations
 - [PhysicsLab.org](#) - Interactive physics exercises
-

7. Supplemental / Special Topics

- DevOps: [DevOps Bootcamp](#)
 - Software Engineering: [Coursera](#), [Udemy](#)
 - GPU Programming: [Coursera GPU specialization](#)
 - Parallel / Concurrent Programming: Udemy C++ concurrency courses
 - Web Development / [Android](#) / [Kotlin](#): Udacity
 - AI / Machine Learning: [Coursera AI Intro](#)
-

8. Study & Practice Tools

- [Visualgo.net](#) - Visualize algorithms & data structures
 - [CSVisTool.com](#) - Interactive algorithm visualization
 - [OverTheWire.org / Bandit](#) - Cybersecurity practice
 - [Excalidraw.com](#) - Diagramming & flowcharts
 - [Timer](#)
-

- [Roadmap.sh](#) - Career learning paths & skill maps
- [brain.fm](#) - focus music and relax music

Usage Tips

1. Start with Math, then move to Programming Fundamentals.
2. Parallel-track Discrete Math for logic skills.
3. Continue to Systems & Low-Level Programming, then Networking.
4. Follow with Physics, Electronics & Robotics.
5. Use study/practice tools to reinforce learning and visualize concepts.

Note: Clickable hyperlinks are included for each online resource.

Self Study Plan for Computer Science and Engineering

Additional Information

About Me:

<https://antp1997.github.io/about.html>

Computer Science Information (OSSU):

<https://ossu.firebaseio.com/>

Course Pace:

- Finish in approximately 5 months
- Take only 3 to 4 courses at a time
