

Self Study for Computer Science and Engineering

Self Study Plan

This document organizes resources for self-learning computer science, engineering, electronics, and mathematics, including free and paid platforms.

I. Math (Foundation for Engineering & CS)

- [Greenemath.com](https://www.greenemath.com) - Algebra & Precalc practice
- [CalcWorkshop.com](https://www.calcworkshop.com) - Calculus
- <https://www.virtualnerd.com/geometry/all/>
- <https://www.allmath.com/> (for help)
- [Desmos.com](https://www.desmos.com) (for help)
- [AllTheMath.org](https://www.allthemath.org/) / [Discrete Math](https://www.discretemath.org/) - Logic, sets, graphs, combinatorics
- [MathsPower4U.com](https://www.mathspower4u.com) - Videos for all math topics (help videos)
- [ProPrep.com](https://www.proprep.com) - Optional paid practice
- [Engineer4Free.com](https://www.engineer4free.com) - Free math & basic engineering resources (optional)

2. Programming & Computer Science Fundamentals

- **OSS University Path to a free self-taught education in Computer Science!**
- [NeetCode.io](https://www.neetcode.io) - Algorithms, DSA practice (lifetime membership)
- [Introduction to parallel programming](https://www.parallelprogramming.com) (in c++)
- [Software construction elements](https://www.softwareconstructionelements.com)
- [csprimer.com](https://www.csprimer.com)
- [Java Programming](https://www.java-programming.com)
- [CS61A](https://www.cs61a.org) - Intro to CS, Python, Data Structures
- [LearnCPP.com](https://www.learn-cpp.com)
- [HackingCPP.com](https://www.hackingcpp.com) - C++ exercises
- [StudyPlan.dev](https://www.studyplan.dev) - Structured C++ curriculum
- <https://www.bigmachine.io/courses/> - Self-taught programming exercises
- [Sp21.datastructures.es](https://www.sp21.datastructures.es) - Data structures & algorithms course
- [C++ multithreading](https://www.cplusplus-multithreading.com) - Modern C++ Features & Concurrency

3. Systems & Low-Level Programming & introduction to Engineering

[Toptechboy.com\(guide for engineering and raspberry pi and arduino\)](http://Toptechboy.com(guide for engineering and raspberry pi and arduino))

- Nand2Tetris.org- Computer architecture & logic design
- NandGame.com - Hands-on digital logic
- [Advance C++ course](#)
- [Introduction to Electricity and Magnetism Specialization](#)
- [wokwi.com\(simulator\)](http://wokwi.com(simulator))
- [Linear Circuits I: DC Analysis](#)

[Digital Signal Processing Specialization](#)

- [Computer Architecture](#)
 - [Electrical engineering 101](#)
 - [Teach yourself Electricity and electronics](#)
 - Assembly Language PDFs:
 - [Learning the art of electronics](#)
 - Introduction to 64-bit Intel Assembly Language Programming for Linux
 - Assembly Language Step-by-Step Programming with Linux 3rd Edition
 - [Introduction Operating system](#)
 - [CS423 Operating System Design](#)- OS concepts
 - LabEx.io - Linux virtual lab environment
 - FastbitLab.com - Embedded programming
 - QT course udemy for c++ beginner course [link](#)
- [Introduction to Engineering](#) Book
- [Design of Digital Circuits with VHDL Programming](#)
- [Crash Course Electronics and PCB Design](#)

4. Networking & Telecommunications

- [TCP/IP Guide](#)- Networking theory
 - Computer Networking: A Top-Down Approach PDF
 - [Su25 CSI68.io](#)- Networking exercises
-

5. Electronics & AI & Robotics

- [DCACLab.com](#)- Online circuits
- [CircuitLab.com](#)- Circuit design
- [Ohmify.com](#)- Electronics fundamentals
- [Kevin Wood Robotics](#)- Robotics projects
- [Udacity Robotics Software Engineer](#)- Robotics programming

6. Physics

-
- [FlippingPhysics YouTube](#)- Physics tutorials
 - [PhysicsLab.app](#) - Interactive simulations
 - [Quntum Computing\(qctrl.com\)](#)
 - [MyPhysicsLab.com](#)- Physics simulations
 - [PhysicsLab.org](#)- Interactive physics exercises

7. Supplemental / Special Topics

-
- DevOps: [DevOps Bootcamp](#)
 - Software Engineering: [Coursera](#), [Udemy](#)
 - GPU Programming: [Coursera GPU specialization](#)
 - Parallel / Concurrent Programming: Udemy C++ concurrency courses
 - Web Development / [Android](#) / [Kotlin](#): Udacity
 - AI / Machine Learning: [Coursera AllIntro](#)

8. Study & Practice Tools

-
- [Visualgo.net](#)- Visualize algorithms & data structures
 - [CSVisTool.com](#)- Interactive algorithm visualization
 - [OverTheWire.org](#) / [Bandit](#)- Cybersecurity practice
 - [Excalidraw.com](#)- Diagramming & flowcharts
 - [Timer](#)
 - [Use PMSS to manage time](#)
-

- [Roadmap.sh](#) - Career learning paths & skill maps
- [brain.fm](#) – focus music and relax music

Usage Tips

1. Start with Math, then move to Programming Fundamentals.
2. Parallel-track Discrete Math for logic skills.
3. Continue to Systems & Low-Level Programming, then Networking.
4. Follow with Physics, Electronics & Robotics.
5. Use study/practice tools to reinforce learning and visualize concepts.

Note: Clickable hyperlinks are included for each online resource.

Self Study Plan for Computer Science and Engineering

Additional Information

About Me:

<https://antp1997.github.io/about.html>

Computer Science Information (OSSU):

<https://ossu.firebaseio.com/>

Course Pace:

- Finish in approximately 5 months
- Take only 3 to 4 courses at a time
